

### Thursday Night Charity Event

Plans have been altered to avoid complications with copyrights. **There will no longer be a structure made of cans.** Instead we will be working with Greater Albuquerque Habitat for Humanity (GAHH).

In order for Habitat to benefit from an event such as this we are asking you to bring a pre-fabricated donation box that you can assemble on site (in the Stamm Commons room in CENT building, same as previously planned). On Thursday night, April 9th, these donation boxes will be assembled on pallets which will be picked up by GAHH and used in their Restore for daily contributions that aid in construction materials and general operations. The donation boxes should be designed to be interactive, coin collection centers. Designs will be judged based on aesthetics and functionality. There are no limitations to the materials to be used. It is highly encouraged to use recycled materials.

#### **Rules for this design:**

Pre-fabrication: all items are to be pre-cut and painted then assembled on site using nails, screws, glue, etc. (Drills will not be provided but UNM will have extension cords for use if needed.)

Size: maximum height 4 feet, maximum width 2 feet, maximum depth 2 feet. Design does not need to be this large but is meant for ease of transportation. It should be free standing and accept all forms of coins. May be designed to sit on counter top.

Weight: no heavier than 150 pounds.

If electricity is wanted, use a solar design. There should be a door (that a lock can be added) to access donated coins.

Be sure to keep color schemes in mind. To see the colors used in the Restore, check GAHH's website at <http://habitatabq.org>.
