

NOTE: Originally prepared by the Division of Government Research (DGR), UNM for the NM Traffic Safety Bureau in 2011 using ArcGIS Server and Flex 2.3.1. This application was partially recreated as an example using ArcGIS for Developers. Similar interactive traffic crash maps were available for many years using a combination of SAS with ArcGIS plus ArcIMS and ArcGIS Server hosted on servers maintained by DGR. Please contact UNM-GPS for any future planned availability.
